

Mathieu Laureti 204, rue de la galène, Gatineau, QC J8Z 3N2 | 819-968-6928 |
mathieu.laureti@gmail.com **Security Clearance:** Secret | **Languages:** English, French (Bilingual) |
<https://github.com/MathieuLaureti>

Technical Skills

- **Languages:** Python, C, Java, SQL, Bash, Rust, (TypeScript/JavaScript).
 - **Backend & Web:** FastAPI, SQLAlchemy ORM, REST APIs, React (Vite), HTML5, CSS3
 - **Infrastructure & DevOps:** Docker, Docker-Compose, Nginx, WireGuard, Linux (Debian), Oracle Cloud, AWS, GitHub Actions.
 - **Networking:** TCP/IP, HTTP, VPN Tunneling, Reverse Proxies.
 - **Tools & IoT:** Git, ESP32, Arduino, PostgreSQL, Redis, Stripe API, GoHighLevel API.
 - **Testing :** Pytest, Locust, K6
-

Professional Experience

MaGermaine (Freelance) | Backend, Infrastructure & CI/CD | July 2026 – Present

- **Architecture :** Built and deployed a containerized backend using Docker and Supabase, managing relational data and payment workflows.
- **AI-Agent :** Integrated an AI agent with tool-calling capabilities to trigger in-app actions via human-in-the-loop validation powered by Claude Sonnet 3.5 and Haiku 4.5.
- **CI/CD :** Engineered an automated, container-based CI/CD deployment pipeline featuring end-to-end testing, image versioning, and production rollback strategies.
- **Communication :** Guided non-technical clients through technical trade-offs, architecture choices, and scoping decisions using clear, non-jargon communication.
- **Client Referral:** Awarded contract via direct client referral from ClicPrime stakeholders following successful project delivery.

ClicPrime (Freelance) | Backend & Infrastructure | Dec 2025 – Present

- **Lead Distribution API:** Engineered an API to distribute marketing leads from ad campaigns using the GoHighLevel (GHL) API.
- **Financial Integration:** Developed a centralized payment processing system using the Stripe API to synchronize financial data across platforms.
- **Custom CRM Development:** Designing and implementing a custom CRM backend (FastAPI/PostgreSQL) for lead and SMS management to replace third-party dependencies.
- **Architecture:** Containerized all microservices using Docker and managed secure routing via Nginx.
- **Hosting :** Set up production server and managed database hosted with AWS
- **Communication :** Executed end-to-end client engagements from initial discovery and technical scoping to production deployment, acceptance testing, and handover.

- **Confidential Network Support:** Managed access control and troubleshooting for a secured network environment under Secret clearance.
- **Workflow Automation:** Developed custom automation tools using Office Script, Power Automate, and Power Apps to streamline email processing and data analysis.
- **Performance:** Offered to extend the mandate in a part-time capacity.

Technical Projects

High-Performance Backend Benchmarking (Capstone Project) | [GitHub Link](#)

- **Rust Implementation** : Rapidly learned and adopted Rust (Axum) from scratch to design, compile, and benchmark high-concurrency microservices against an established Python (FastAPI) baseline.
- **Resource Optimization** : Architected a resource-optimized environment on constrained hardware (Raspberry Pi 5, 8GB RAM) to stress-test memory models and asynchronous runtimes.
- **Results** : Benchmarked database workloads with TimescaleDB and Redis using K6 and Locust, proving a 156% throughput increase with Rust and a 582% surge via caching under extreme load.

Hybrid-Cloud Network Tunneling (CGNAT Bypass) [GitHub Link](#)

- **VPN** : Architected a WireGuard VPN tunnel between a local home server and an Oracle Cloud VPS to bypass CGNAT.
- **Networking** : Configured iptables and IP masquerading for secure traffic routing from a public IP to private local services.

IoT Plant Monitoring & Packet Decoding | [GitHub Link](#)

- **IOT** : Developed an IoT solution using ESP32-CAM to capture and stream real-time data to a FastAPI backend.
- **Packet Decoding** : Decoded a proprietary Bluetooth Low Energy temperature/humidity sensor protocol to extract and stream environmental data to local server.
- **Infrastructure** : Locally hosted the interface using Docker and Nginx.

Education

Bachelor of Computer Science (B.Inf.) | April 2026

- Université du Québec en Outaouais (UQO), Gatineau, QC
- CO-OP Program
